*Campo già inserito e da cui è possibile solo scegliere dal menù una regione, grazie alla quale viene generata una chiamata AJAX per trovare le province corrispondenti. Anche il campo provincia è già inserito, ma a differenza di "Regione" viene salvato nel database e quindi nel test di unità e di integrazione lo andiamo a controllare per una maggiore sicurezza. Per loro natura, tali campi permettono unicamente una selezione tra dati predefiniti. Per tale motivo, questi campi non verranno testati.
